

# UconDB structure and challenges

Data from the DAQ DB is given by runs, and that is the way it is stored in the uconDB

Data from the other Databases is mostly stored **continuously** (not run based) and with **high granularity**.

## Folders:

sp\_protodune

....

test\_protodunell

## Objects:

configuration

IFBeam

## Version:

blob-run#

blob-run#

....

blob-time#

blob-time#

...

Stored with run key

Stored with validity time
